Re: Hydra-Stop services

Greetings,

Haegelin Construction Company contracted for service with Hydra-Stop in March of 2006 to install a valve in an existing 24" CSC water line in Travis County, Texas. The purpose of the project was to relocate the 24" water line for a building site.

The entire process of installing the valve required multiple visits from Hydra-Stop to verify the water line size and type, install the valve and control water flow, and finally to return and remove the equipment. We found their personnel to be knowledgeable and friendly and their equipment to be state of the art. In a future situation where hydra-stop service is required to complete a project, we would not hesitate to call on Hydra-Stop for their assistance.

With regards,

Michael W. Carson
