Department of
Water Distribution

The Hydra-Stop system and it's techniques has become a benifical piece of equipment to the Water Distribution Division. It has helped us in eliminating the need of employing obsolete and costly methods of dealing with valve and hydrant problems. It became an asset to us the first week we bought it, in replacing a valve in a neighborhood that would have required shutting the water off in a eighteen block area. The Hydra-Stop system has also helped us in eliminating some overtime due to shut downs that would normally had to be done at night. Whebn turning the water off, and working valves it usually became an inconvienece to some of our customers being without water during working hours. Now we can isollate small sections without anyone knowing we are there. Though it will not eliminate all our water shut down problems, especially during unforseen water main breaks, it will help to significantly reduce maintenance labor, by reducing our overtime, and helps in reducing repair and maintenance costs.

Thanks

Steve Pagley
