AIDA PATRICIA NIÑO MORA
Directora Mejoramiento Calidad de Vida

AR PRIAS CAICEDO
Gerente Corporativo Gestión Humana y Administrativa

STATION 10

1. The first part of the station is a large open field with a few scattered trees. The ground is mostly flat and appears to be a mix of soil types. There are some small mounds of earth and what looks like a small stream or ditch running through the field.

2. The second part of the station is a wooded area with a dense canopy of trees. The trees are mostly deciduous and have lost their leaves. The ground is covered in fallen leaves and some small plants are starting to grow.

3. The third part of the station is a rocky outcrop with some sparse vegetation. The rocks are mostly grey and appear to be of a different geological formation than the surrounding area. There are some small plants growing in the cracks between the rocks.

4. The fourth part of the station is a small stream or ditch that flows through the field. The water is clear and flows in a steady stream. There are some rocks in the stream and some small plants growing along the banks.

5. The fifth part of the station is a small clearing with a few trees and a small stream. The ground is mostly flat and appears to be a mix of soil types. There are some small mounds of earth and what looks like a small stream or ditch running through the clearing.

6. The sixth part of the station is a small stream or ditch that flows through the field. The water is clear and flows in a steady stream. There are some rocks in the stream and some small plants growing along the banks.

7. The seventh part of the station is a small clearing with a few trees and a small stream. The ground is mostly flat and appears to be a mix of soil types. There are some small mounds of earth and what looks like a small stream or ditch running through the clearing.

8. The eighth part of the station is a small stream or ditch that flows through the field. The water is clear and flows in a steady stream. There are some rocks in the stream and some small plants growing along the banks.

9. The ninth part of the station is a small clearing with a few trees and a small stream. The ground is mostly flat and appears to be a mix of soil types. There are some small mounds of earth and what looks like a small stream or ditch running through the clearing.
